

# Rainwater Tank Filters

All filters are easy to clean yet completely sealed to protect against mosquitos & algae growth

A good filter will prevent mosquitos and clean rainwater of most impurities normally collected from your roof and gutters

**Tadpole**  
FIRST STAGE FILTER

## Frogmouth

The Frogmouth is a first stage filter that through its unique low maintenance design, removes leaves and gutter debris. It is fully closed, protecting the rainwater storage from mosquitoes and restricting light from entering that helps to reduce algae growth. (CODE: FMFILTER)

**Frogmouth**  
FIRST STAGE FILTER

## Tadpole

The Tadpole is a first stage filter designed for wet and dry systems, through a 5.0mm and 0.9mm dual stainless steel filtration mesh the Tadpole prevents biological growth and insect breeding (mosquitoes) No need to clean leaves and debris from basket type rainheads. (CODE: TPFILTER)

**Wet Frog**  
SECOND STAGE FILTER

## Wet Frog

The Wet Frog second stage constant filtration system is the ideal solution for wet systems. It is designed as a completely sealed unit to filter through a 500 micron stainless steel mesh that removes fine silt that can damage washing machines when using rainwater from tanks. (CODE: WFFILTER)

**Lazy Lizard**  
FINAL STAGE FILTER

## Lazy Lizard

Lazy Lizard is a final stage filter that works with the Frogmouth filter or other rain head type filters with a 0.9mm mesh. It features a 240 micron stainless steel mesh filter that removes materials such as pollen, sand and silt, ensuring cleaner water is delivered to washing machines and toilets, and helps prevent sediment build-up in hot water (CODE: LLFILTER)

**COMING SOON**

**Platypus Rainwater Diverter**

## Platypus

The Platypus is a rainwater diverter to the pool or garden by simply turning the selector 90° (to the direction required). This high flow system can be used in conjunction with the Frogmouth or Tadpole filters providing water that is filtered from leaves, mosquitoes and general debris. (CODE: PPDIVERT)
